bus traffic. One side of the tree was natural and round and the other side was sheared flat. The tree was deformed and very unattractive. A columnar type tree should have been used. "There is a tree to fit every situation and it is the job of the municipal arborist to know the trees," Mr. Wynstra said.

The three downtown projects that require plans for plantings and which Mr. Wynstra was working on are (1) the Transit Mall — a 10 block area that will be closed to automobiles and allow pedestrian and bus traffic only. 300 trees. (2) a boulevard planting on a main arterial near what is now called skid row. This will involve three rows of trees, and (3) a four square block area being developed by the Portland Gas and Electric Co. which will require about 100 trees.

Then there is a little shopving area outside the main downtown area where the merchants planted Kwanzan cherries grafted on 4-ft. stems. The trees are just about wiped out. The low branches have been hit and scraped by automobile doors and been more of an obstruction than a pleasure. The short wooden stakes have been broken or pulled out. The street is 'raggedy' looking. Mr. Wynstra will change all that with a complete removal and proper installation of Kwanzan cherries grafted on 6½ ft. standards and staked, on the street side, with 8 ft. iron fence posts.

Mr. Wynstra mentioned that a follow-up program of maintenance is just as important as the initial planting. He is planning a 2-year maintenance program for the downtown trees including watering, fertilizing, checking ties, mulch, stakes, and spraying if required.

Mr. Wynstra is a graduate of Michigan State University where he majored in municipal forestry and park management. His first job was in his hometown of Racine, Wis. where he was the first municipal arborist. After four years he accepted the municipal arborist post in Columbus, Ohio where he stayed for eight years. His philosophy of what a municipal arborist should be revolves around public relations and a knowledge of street trees — that is, ornamentals which will complement site factors in the city.

One of the nicest things to hear about Mr. Wynstra's move was the fact that his family was delighted as he was about living in Portland. They thought they'd miss their farm in southern Ohio, but they've been too busy making new friends and becoming involved in community activities.

"This was a really new new start," Mr. Wynstra said. "We packed our clothes, books, slides, a few household items that had special meaning and that was it. We bought our furniture when we arrived in Portland." The family flew on a DC-10 together — Alex, his wife Eileen, sons Alex Jr. and Donnie, and their two dogs, a part-beagle "Danny" and a Doberman "Chubby". They are all enjoying their new house near Delta Park and when they aren't jogging around the park, they're in the park trying to improve on their tennis game.

The weekends are free to investigate the surrounding areas. They are one hour from Mt. Hood and two hours from the ocean. "It's wonderful," Mr. Wynstra said. "If we want to see some snow we drive up to the mountain, do some skiing, sit around the lodge, then come back to dry streets in Portland. No shoveling of snow at home. I'm really enjoying this winter."

Mr. Wynstra likes to keep going thru the day and rarely stops for a full lunch. He enjoys relaxing for awhile and fancies cheese — a Dutch lunch such as that savored by his ancestors. Dinner is another story. Mrs. Wynstra bakes bread and sets a fine table.

There are many excellent restaurants in Portland for special evenings out, but since the Wynstra's taste is for primarily beef and Japanese food there are two restaurants they recommend — a steak house that will give you a 72-oz. steak FREE if you can eat it within an hour (he hasn't been that hungry yet); and Bush Garden, an authentic three-storied Japanese restaurant downtown where dinner is taken in one of 40 private Japanese rooms, sitting on the floor, on padded cushions, with your legs dangling in a well over which is your table. It was an exverience we shared with the Wynstra's one evening and it was delightful dining.

The feast began with a clear soup graduating to Prawns Tempura, Beef Teriyaki, rice, Batayaki, Sukiyaki, and Sunomono, all of which we ate with chopsticks between sips of hot sake. We turned down dessert, but couldn't resist the fortune cookies. Alex's fortune said — "You have found your Shangri-La."
